# SPECIFICATIONS

The SnowMasters Auto Refill System is a proprietary system that automatically maintains the fluid levels in your SnowMasters Special Effects devices. Compatible with all other equipment that utilizes non-explosive chemicals, it can also be used in machines such as foggers, hazers, and snow machines etc. The system detects the fluid level in the equipment's smaller built-in reservoir and signals a transfer pump connected to a bulk supply drum to refill the reservoir - all without user intervention! This is an ideal solution for installations with limited or difficult access such as ceilings or stages or when extended run-times are desired.

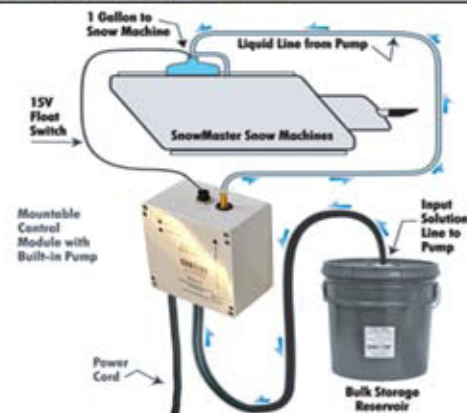

## Package Includes

Includes everything required to install the system  
Control module with built-in pump  
1 gallon adapter lid  
Inlet strainer  
Illustrated instructions  
Priming tool

## Technical Specifications

Available in 110 volt and 220 volt models  
Pump and control assembly sealed against moisture  
650CC/Min (21 ounces/min)  
Low voltage (< 15 volts) fluid detection  
Fluid transfer up to 300 feet  
Exceeds CE standards  
Built-in diagnostics indicators  
Dimensions approx. 4" x 4" x 4"  
Shipping Weight: 6.25 lbs  
LED system verification
